

EZProxy Setup Process

Any institution using EZproxy as its off-campus authentication system can utilize this same tool to authorize access to Films On Demand. After a simple setup process, educators and/or students can view their authorized video content from Films On Demand by using the same credentials that they use to log into the campus-wide EZproxy system. Follow these easy steps to get started:

To set up Films On Demand EZProxy Authentication:

1. Confirm that you have a Proxy Server. This type of authentication requires that you have one already set up.
2. Send an email to video.support@infobaselearning.com with the following info:
 - The exact IP address of your proxy server
 - Any additional IP ranges that you wish to register with us
3. You will then receive an email from a support representative with the following information:
 - Our EZproxy data that must be added to your proxy server config file
 - Your customized, IP authenticated link for your reference.

This authenticated link will allow your students and faculty to access your entire Films On Demand collection using their EZproxy credentials.

To Apply Your EZProxy Information to Title and Segment URLs:

1. Have you set up an Admin user for your Films On Demand account? If not, let video.support@infobaselearning.com know which user you would like to designate as the Admin.
2. Once you have a designated Admin account, use those credentials to log into admin.films.com. Follow these steps to enter your Proxy URL into the Proxy URL Modifier:
 - Click on the "Admin Tools" tab at the top of the screen
 - Click on "URL Proxy Modifier" tab
 - Select which type of Modifier you need, Default Format or Alternate Format by clicking on the corresponding tabs
 - Enter your proxy URL in the text box(es). You can preview your entry by clicking "Preview"
 - Check off the boxes next to the URLs where you would like the proxy information to display. Your options are: Subject Menu URL (Subject Browsing), Title and Segment URL's (Video Page), Custom Playlist URL (My Playlists), Search Widget.
 - Click "Set Proxy" and your proxy information will be added automatically to the selected links.
3. Test the URLs to make sure that they work. If they do not work, contact video.support@infobaselearning.com for further information.

Once you activate your Proxy URL Modifier settings, your students and faculty will be able to access individual Titles and/or Segments using their EZproxy credentials.

If you have any additional questions about setting up EZproxy, please contact the Films On Demand Product Support team at video.support@infobaselearning.com or call 1-800-322-8755 Ext. 4302.
